Graduate Medical Education Policies and Procedures

Policy Title: Supervision of Graduate Medical Education Residents

Original Date: November 2010
GMEC Endorsed: May 2015
Next Revision Date: May 2017

David C. Weigle, PhD, MPH
Assistant Dean for Graduate Medical Education
Designated Institutional Official

PURPOSE:

To ensure:

- the provision of safe, effective, and high quality patient care at all times;
- the presence of a clear and uniform structure for resident supervision within all UTSW training programs that is consistent with national standards of supervision and graduated responsibility as defined by the Accreditation Council for Graduate Medical Education (ACGME);
- educational needs of all residents are attained in a structured environment that provides appropriate supervision and graded responsibility appropriate to the residents’ level of education, competence and experience;
- all training environments promote the development of health care providers who are competent to deliver patient care independently upon completion of their training.

DEFINITIONS

For purposes of this policy, the following definitions are taken from the ACGME Glossary (April 2015).

**Clinical Supervision:** A required faculty activity involving the oversight and direction of patient care activities that are provided by residents/fellows.

**Conditional Independence:** Graded, progressive responsibility for patient care with defined oversight.

**Faculty:** Any individuals who have received a formal assignment to teach resident/fellow physicians. At some sites, appointment to the medical staff of the hospital constitutes appointment to the faculty.

**Program Director:** The one physician designated with authority and accountability for the operation of the residency/fellowship program.

**Program Year:** Refers to the current year of education within a specific program; this designation may or may not correspond to the resident’s graduate year level.

**Resident:** A physician in an accredited graduate medical education specialty program.

**Site:** An organization providing educational experiences or educational assignments/rotations for residents/fellows.

**Sponsoring Institution:** The organization (or entity) that assumes the ultimate financial and academic responsibility for a program of GME. The sponsoring institution has the primary purpose of providing educational programs and/or health care services (e.g., a university, a medical school, a hospital, a school of public health, a health department, a public health agency, an organized health care delivery system, a medical examiner’s office, a consortium, an educational foundation).
POLICY:

Roles and Responsibilities:
Resident education is progressively graduated in both experience and responsibility with primary attention to the benefit, and safety of the patient. Development of mature clinical judgment requires that each resident be involved in the decision-making process. The conditional independence of the resident should be determined by each program and individualized to be commensurate with the clinical circumstances and ability of the resident. In such an environment, each physician participating in the clinical training environment will have specific and defined roles and responsibilities:

- **Attending Physicians** are responsible for:
  - the assessment, diagnosis, treatment, and outcomes of all patients undergoing care at sites of care functioning under the sponsoring institution.
  - ensuring their role is identified per hospital policy and ACGME C.P.R. VI.D.1.(a-b).
  - providing the appropriate level of supervision based upon the nature of a patient’s condition, complexity of care, and level of competence of the residents being supervised.
  - oversight and delineation of duties and graded responsibilities for care provided by all members of any service team caring for a patient.

- The **Program Director** is responsible for
  - defining guidelines that establish roles and responsibilities appropriate for each level of training or clinical milestone in accordance with national standards of supervision and graded responsibility as defined by the Accreditation Council for Graduate Medical Education;
  - communication and collaboration with residents, faculty, clinical and operational leadership to ensure these guidelines are understood;
  - monitoring adherence to these guidelines.

- **Residents**
  - are supervised by an attending physician;
  - are responsible for being aware of their limitations, roles, and responsibilities within the course of patient clinical care;
  - are supervised in a manner consistent with national standards of supervision as defined by the Accreditation Council for Graduate Medical Education;
  - are provided responsibility in a manner consistent with national standards of graded responsibility and conditional independence as defined by the Accreditation Council for Graduate Medical Education;
  - are expected to know the level of supervision required for their level of training or clinical training goal, and not practice outside of that scope of service;
  - are expected to communicate effectively with attending physicians and other members of the health care team.
  - Are required to inform patients of their respective role in each patient’s care.

Communication:
Communication between residents and the attending physician will occur at the time patient care decisions are being made. Prior to clinical care decisions, the attending physician will facilitate communication regarding care decisions. Examples include, but are not limited to, the following:

- Admission and discharge of a patient;
- Decision making applied to high risk or complex procedures and/or interventions, to include surgeries, use of moderate sedation, and high risk or complex diagnostic procedures;
An important change in status occurs and/or when a patient is transferred from one service to another and/or from one level of service to another (e.g. Admission of a patient from the clinic, transfer of a patient to an intensive care unit, etc.)

When a patient’s condition is unexpectedly deteriorating, or when a patient is not improving clinically in an expected fashion or time course; and

When disclosure of a significant adverse event is necessary.

**Documentation:**
Direction of clinical care and supervision of the residents must be documented in the medical record in accordance with the Bylaws and/or Rules and Regulations of the participating site. In particular, the following events require attending documentation that reflects appropriate supervision and ensures comprehensiveness of the record:

- Patient history and physical examination, and/or patient admission;
- Patient discharge;
- Surgeries and high-risk procedures; and
- Progress notes that cover significant events, complications, patient and family communication, treatments and response to treatment. An attending progress note is particularly important in the event of transfer of responsibility of care

Consultation: Clinical consultation ranges from verbal advice to interdisciplinary concurrent care. The documentation will reflect the complexity of the clinical question and degree of consultant involvement.

Programs must submit completed Supervision Grids to the Graduate Medical Education Office annually. The Supervision Grid template is available through the GME Office.

**Emergencies:**
In an emergency situation to preserve life or prevent serious impairment to health, residents shall be permitted to implement life support services. Notification must be made to the supervising physicians as soon as possible. The responsibilities of the attending physician to the patient and to the residents are not changed by these circumstances.
