Peloton Therapeutics:

Peloton is a well-positioned, early stage company whose vision is to develop first-in-class, highly effective medicines for serious and life-threatening diseases by leveraging great science, talented employees, and productive collaborations. We seek high-caliber individuals to join our growing team and contribute to our culture of collaboration, innovation, excellence, and shared sense of purpose. We offer an attractive compensation package including company ownership, competitive salary, comprehensive benefits, and the opportunity to be part of a vibrant biotech environment.

Job Description:

This is an exciting opportunity for a highly motivated individual to contribute to Peloton's innovative preclinical drug discovery pipeline in cancer therapeutics targeting tumor cells and tumor microenvironment. The successful candidate will provide in vitro and in vivo biology support for our HIF-2α program and the prosecution of novel drug targets. Day-to-day activities will include the design and execution of studies to evaluate efficacy of lead compounds in modulating host immune system to mount an effective anti-tumor response, and the mechanism underlying the impact on immune cells. She/he will work closely with a team of experienced medicinal chemists and structural biologists to ensure rapid progression of lead compounds to preclinical development, and elaboration of novel biology using proprietary lead compounds. She/he will also contribute to the design and execution of preclinical studies to impact clinical development strategy. The candidate will have ample opportunities to generate data for formulating new hypotheses, and to identify new approaches for further advancing the therapeutic utility of lead assets. This position will provide an excellent opportunity for learning the drug discovery and development process in a highly supportive and dynamic environment.

Job Requirements:

This position requires a Ph.D. in immunology, or related field, plus 2 to 4 years of postdoctoral training. Preference will be given to applicants with experience in working with mouse tumor models. The applicant must be proficient in cellular immunology and the fundamentals of innate and adaptive immune responses. The successful candidate will have extensive hands-on experience in
tissue culture, flow cytometry, and molecular analyses of gene expression. Experience in working with mice is required. A record of productivity, as documented by publications in peer-reviewed journals, is essential. Strong written/verbal communication skills are crucial, as is the ability to work with minimal supervision within a supportive team environment.

Hires Needed: 1
Wage Amount: Based on Experience
Company Contact: hr@pelotontx.com

_Peloton Therapeutics, Inc. is an oncology drug discovery and development company focused on advancing first-in-class small molecule therapies that provide patients suffering from life-threatening diseases with new therapeutic options. The company is driving forward multiple oncology programs targeting unexploited molecular vulnerabilities including adaptive processes that are induced in the tumor microenvironment by hypoxia, nutrient stress, and that result in evasion of anti-tumor immune responses._ [http://pelotontherapeutics.com](http://pelotontherapeutics.com)
