

Cytogenetics Rotation - Objectives

Professionalism

1. **Objectives:** What aspects of professionalism should the resident learn on this rotation?
 - a. Public speaking skills.
 - b. Team-building.
 - c. Adherence to ethical principles.
 - d. Sensitivity to a diverse patient population and work environment.
 - e. Commitment to carrying out professional responsibilities.
2. **Plan:** How does the resident go about learning professionalism on this rotation?
 - a. Development and review of all conference presentations with cytogenetics faculty.
 - b. All residents contribute to the common teaching materials while on the service. This may include development of cases for additional teaching exercises, identification of recent literature resources, online resources, or technology developments. This exercise provides for consistent improvement of the educational experience for subsequent residents.
 - c. Attendance at daily cytogenetics intake rounds and all weekly section meetings.
3. **Supervision/Assessment:** How is the resident's professionalism assessed and by whom?

Professionalism is assessed by daily interactions within the laboratory, presentations at conferences and didactic teaching sessions. Professionalism is assessed in writing by cytogenetics faculty and staff.
