

# Juniper VPN Operating System Support

-- Page last edited or reviewed on August 11, 2009.

The Juniper vendor categorizes Operating System support in three ways:

<b>Qualified</b>	The platforms listed in the “qualified” category have been systematically tested by Juniper’s QA department and are officially supported.
<b>Compatible</b>	The platforms listed in the “compatible” category have not been systematically tested by Juniper’s QA department; but based on testing in previous releases and knowledge of the platform, Juniper expects that the functionality will work and will fully support these platforms.
<b>Unsupported</b>	All other platforms are not supported.
