A postdoctoral position is available for a highly-motivated scholar in the Whitehurst lab in The Simmons Comprehensive Cancer Center at UT Southwestern Medical Center. The Whitehurst lab focuses on understanding the tumorigenic function of Cancer Testes Antigens, testis genes that are anomalously expressed in tumor cells. The laboratory focuses on the molecular mechanisms by which these proteins contribute to neoplastic transformation and how their expression can be exploited for direct targeting and/or immunotherapy. For more information about the research program, please see: http://www.utsouthwestern.edu/labs/whitehurst/

Candidates must have a recent Ph.D. in biophysics, biochemistry, chemistry, chemical biology, cancer biology or a related field.

Interested candidates should send a CV, statement of research interests and the names of three references to Angelique Whitehurst, Ph.D. at angelique.whitehurst@utsouthwestern.edu

*UT Southwestern Medical Center is an Affirmative Action/Equal Opportunity Employer. Women, minorities, veterans and individuals with disabilities are encouraged to apply.*
