Under the direction of Rebecca Gruchalla, M.D., Ph.D., the Division of Allergy and Immunology in the Department of Internal Medicine (IM) and the Division Pediatric Allergy and Immunology in the Department of Pediatrics work as one team. While administratively separate, the two Allergy and Immunology divisions function as one, blending teaching, clinical care, and research.

Patient care and clinical activities are based at the Asthma, Allergy, and Immunology and Immunodeficiency Clinics at Children’s Health, Parkland Memorial Hospital, and UT Southwestern, where division faculty provide comprehensive evaluation, diagnostic, and management services for children and adults, respectively, with allergy, asthma, and immunological disorders.

Faculty members participate in both clinical and basic science research efforts. Drs. Bird and Parrish perform important clinical research in food allergy; Drs. Khan and Chow in drug allergy; and Dr. Wysocki in immunodeficiency. The Clinical Immunology Program is recognized as a Jeffrey Modell Foundation Diagnostic and Research Center.

The Division has one of only 78 Accreditation Council for Graduate Medical Education-accredited programs for fellowship training in allergy and immunology. Division faculty also provide the major instruction to pediatric and internal medicine residents in the evaluation and management of children and adults with allergic diseases, asthma, and immunodeficiency diseases.

**Division Faculty**

Allergy and immunology spans both Pediatrics and Internal Medicine, with five pediatric-based and three internal medicine-based faculty members who are all certified by the American Board of Allergy and Immunology. All division faculty are clinically active and firmly committed to clinical teaching. Volunteer faculty members in private practice also participate in clinical and educational activities.

**Honors / Awards**

Best Doctors/Pediatric Specialists in Dallas, *D Magazine, America’s Top Doctors, Castle Connolly*
• Drew Bird
• Rebecca Gruchalla
• David Khan
• Christopher Parrish

**Texas Super Doctors, Texas Monthly, Texas Super (top) Doctors**

**Conference Presentations**

American Academy of Allergy, Asthma, and Immunology Annual Meeting, Phoenix, AZ, February 2022
Bird D

Oral Presentation, "Updates in Food Allergy Research: What You Should Know"

Chambliss J

Oral Presentation, "Obtaining the Correct Asthma Diagnosis by Utilizing Asthma Guidelines"
Oral Presentation, "Pathophysiology of Urticaria"
Oral Presentation, "Case Scenarios of Urticaria and Possible Therapies for Improvement"

Chow T

Oral Presentation, "Is It Just Me or Does My Throat Feel Tight? Considering Mimickers of Anaphylaxis"
Oral Presentation, "Anaphylaxis After COVID-19 Vaccination: A Registry-Based Study."

Khan DA

Oral presentation, "Updates on Drug Allergy Practice Parameter"
Oral presentation, "JACI In Practice Year in Review: Drug Allergy and Urticaria/Angioedema"
Oral presentation, “Antibiotic Allergy: Utilizing the In Practice Drug Allergy Resources”

Parrish C

Workshop, “Telemedicine Tips for Advanced Practice Providers: Which Allergy Patients and Conditions Are Best Suited for Telemedicine?”
Symposium, “Improving Your Clinical Practice: Understanding Different Types of Food Challenges and Their Associated Procedures”

Other Conferences

Bird D

British Society of Allergy and Clinical Immunology Global Allergy Online Symposium, London, England, United Kingdom, February 2023
Presentation, "Future Immunotherapy Adjuvants"

Chambliss J

American Academy of Pediatrics Annual Meeting, Anaheim, CA, October 2022
Presentation, “Asthma and Respiratory Allergies – Recent Advances in Allergy/Immunology”

Chow T

TAAIS Annual Meeting, Lost Pines, TX, April 2022
Presentation, “Re-labeling in Drug Allergy”
Presentation, “Safety of Subcutaneous Immunotherapy in Severe Asthma”

Khan DA

Advanced Rhinosinusitis Course, Dallas, TX January 2022
Presentation, “Updates on AERD”

Western Society of Allergy, Asthma and Immunology, Maui, HI, February 2022
Presentation, “Updates on AERD (Donald Stevenson Lectureship)”
Presentation, “What’s New in the Updated Drug Allergy Parameter”

University of Chicago Internal Medicine Grand Rounds (Virtual) March 2022
Presentation, “Updates on Antibiotic Allergy”

Southeastern Allergy Meeting, Charleston, SC, March 2022
Presentation, “Updates on Antibiotic Allergy”
Presentation, “Refractory Chronic Urticaria”

Korean Allergy, Asthma, and Immunology 50th Meeting, Seoul, Korea, May 2022
Presentation, “Updates on Cephalosporin Allergy”

North Carolina Allergy, Asthma and Immunology Society Meeting, Outer Banks, NC, May 2022
Presentation, “Updates on Antibiotic Allergy”

UTSW Anesthesiology Grand Rounds, Dallas, TX, June 2022
Presentation, “Penicillin Allergy and Perioperative Anaphylaxis”

European, Allergy, Asthma, and Immunology Meeting, Prague, Czech Republic, July 2022
Presentation, “Updates from the JACI Journals on Drug Allergy”

Florida Allergy, Asthma, and Immunology Society Meeting, Orlando, FL, July 2022
Presentation, “Updates on Antibiotic Allergy”
Presentation, “Refractory Chronic Urticaria”

Allergy & Immunology Grand Rounds, Mayo Clinic, Rochester, MN, August 2022
Presentation, “Drug Allergy Parameter Updates”

Minnesota Allergy Society, St Paul, MN, August 2022
Presentation, “Refractory Chronic Urticaria”

TAAIS Primary Care Resident’s Conference, Lakeway, TX, August 2022
Presentation, “Careers in Allergy & Immunology”
Presentation, Drug Allergy”

JPS OB Grand Rounds. Virtual, September 2022
Presentation, “Updates on Antibiotic Allergy for OB/GYN Specialists”

Regional Outreach for Residents on Allergy & Immunology, Washington, DC, October 2022
Presentation, “Why I Should Become an Allergist/Immunologist”

Medicine Grand Rounds, University of Iowa, Iowa City, IA, October 2022
Presentation, “What’s New in Antibiotic Allergies?”

Allergy & Immunology Meeting, 2022
Presentation, “Refractory Chronic Urticaria”

World Allergy Organization Meeting, Istanbul, Turkey, October 2022
Presentation, “What’s New in Antibiotic Allergy?”
**Education and Training**

The Division of Pediatric Allergy and Immunology is committed to providing quality medical education for medical students, residents, and fellows. It has an active fellowship program and provides inpatient and outpatient opportunities for residents and medical students.

**Medical Students**

Pediatric Allergy and Immunology offers a fourth-year clerkship for medical students. This course provides an in-depth exposure to pediatric allergy and immunology via:

- Clinical experience
- One-on-one discussions between student and faculty regarding pre-determined topics outside of the clinic
- Attending structured didactic sessions/conferences
- Self-study through prepared curriculum material

The Division of Allergy and Immunology is an Ambulatory Clerkship clinic site, providing second- and third-year medical students with exposure to allergy and immunology clinical experiences in the pediatric allergy and adult asthma clinics.

Rory Nicolaides was selected as an Associate Clerkship Director for the Pediatrics Clerkship in the UTSW Medical School. In her role, Dr. Nicolaides is the Course Director for both the Pediatrics Sub-Internship course and the Pediatrics Track of the Residency Essentials course. As Course Director of Residency Essentials, Dr. Nicolaides has developed a four-week curriculum of didactic and simulation sessions designed to prepare 24 fourth-year medical students who have applied to pediatrics residency for their intern year.

**Residents**

The Pediatric Allergy and Immunology Division provides the major instruction to pediatric and internal medicine residents in the evaluation and management of children and adults with allergic diseases, asthma, and immunodeficiency diseases. It also provides didactic teaching for the residents on the basics of allergy and immunology and directs teaching for the residents in the regular departmental clinical conferences and as part of the inpatient consultation service.

An Allergy and Immunology elective is available for pediatric and internal medicine residents, and fourth-year medical students. The objectives of the elective are to:
• Develop a working differential diagnosis of allergies, asthma, and primary immunodeficiency disorders.
• Learn how to conduct a complete physical exam, including the upper and lower airways.
• Examine and discuss patients from all major allergy and immunology categories: allergic rhinitis, asthma, urticaria, drug allergy, food allergy, and primary immunodeficiency.

Residents see outpatients in the clinics under the supervision of one of the members of the Division faculty. Relevant articles about specific allergic and immunologic disorders are provided to residents at the beginning of each rotation, and residents attend clinical conferences offering didactic teaching for fellows.

Drs. Rory Nicolaides and Timothy Chow also lead quarterly half-day sessions for the Pediatric Residency Academic Half Days. These sessions consist of interactive small group learning via a journal club, interactive case presentation, and didactics on Allergy and Immunology topics.

**Fellows**

Although recognized for its scientific achievements, the Division of Pediatric Allergy and Immunology is committed to excellence in clinical care and teaching. Toward this end, the Allergy and Immunology Training Program, directed by David Khan, M.D., has grown in both size and stature with four funded fellowship positions since it enrolled its first fellow in 1982.

**Balanced Clinical Experiences**

Successful training in Allergy and Immunology should consist of balanced exposure to training experiences involving adults and children, no matter what the training background or the long-term plans of any particular fellow in training. Drs. Rebecca Gruchalla, David Khan, and Chris Wysocki oversee the adult teaching clinics at Parkland Memorial Hospital and the University West Campus, while Drs. Drew Bird, Chris Parrish, Jeffrey Chambliss, Chris Wysocki, Rory Nicolaides, and Tim Chow oversee the teaching clinics at Children’s Health™.

Further staffing of both adult and pediatric clinics is provided by our 14-volunteer clinical faculty. Approximately 40% of Allergy fellows have come from pediatric house staff programs, and approximately half of the outpatient clinics required of Allergy and Immunology fellows primarily involve children.

**Diversified Training Experiences**

The UT Southwestern program offers a diversity of clinical experiences in Allergy and Immunology. It has a strong primary immunodeficiency program and is one of the Diagnostic and Research Centers for the Jeffrey Modell Centers Network. In addition, a Food Allergy Center has been established for clinical and research purposes at Children’s Health™. The Food Allergy Center has been recognized as a Food Allergy Research & Education (FARE) Clinical Network Center of Excellence since 2015 and was awarded the designation of a Discovery Center of Distinction in 2020.

The Adult Allergy Division operates the Parkland Asthma Clinic, which oversees the care of adult patients with moderate to severe asthma, and the Parkland Allergy Clinic and the clinics at the University’s West Campus, which are tertiary/quaternary referral centers for patients with chronic urticaria, drug allergies, hereditary angioedema, common variable immunodeficiency, mastocytosis, and anaphylaxis.

Fellows also have exposure to other common conditions including rhinitis, asthma, sinusitis, and atopic dermatitis in both the pediatric and adult clinics.

**Research**
All fellows are required to participate in at least one research project. Current and past projects have been extremely diverse – most are clinically oriented, and some are basic science-oriented – a reflection of the differing interests of the past and current fellows. Because training positions are fully funded by Parkland Memorial Hospital and Children’s Medical Center, and not by federal training grants, fellows are encouraged to consider research opportunities in a diversity of fields.

Fellows are encouraged to present the results of their research studies at national meetings. The majority of fellows are able to publish at least one manuscript based on their fellowship training. Fellows in training are encouraged to travel to one national meeting during each of the two training years and are provided financial support for this purpose.

Success of Training Program Graduates

Within the past 16 years, 100% of the graduates of UT Southwestern’s Allergy and Immunology training program have passed the American Board of Allergy and Immunology certifying examination. Most graduates are currently in private or group practice settings; however, a few have become full-time medical school faculty members. More than half of our clinical faculty are prior graduates of the Allergy and Immunology training program.

Research Activities

Dr. David Khan is conducting various research projects in adults focused on drug allergies, refractory chronic urticaria, mood disorders and asthma, and rush immunotherapy.

Drs. Bird and Parrish continue conducting active research into interventional therapeutics for treatment of life-threatening food allergies. Since 2010, more than 20 clinical research trials have been conducted in the Food Allergy Center with support from a variety of sources, including private foundations and grants and industry support. In 2019, Dr. Bird was invited to participate in the National Institutes of Health (NIH)/National Institute of Allergy and Infectious Diseases (NIAID)-funded Consortium for Food Allergy Research. In 2020, Drs. Bird and Parrish were awarded the FARE Clinical Network Discovery Center of Designation grant, providing $50,000 per year through 2025. Dr. Parrish continues to participate in clinical trials of emerging therapies for eosinophilic esophagitis as well.

Dr. Wysocki collaborates with Dr. Nicolai Van Oers in the basic Immunology department on projects related to novel gene discovery in primary immunologic disorders and on various aspects of DiGeorge/22q11.2 deletion syndrome. In collaboration with Dr. Victor Aquino from the Stem Cell Transplant team, the program is involved in clinical research through the Primary Immunodeficiency Treatment Consortium.

Dr. Timothy Chow conducts active research into charactering pediatric adverse reactions to drugs, investigating novel diagnostic and management strategies for pediatric drug allergy, and increasing access to drug allergy evaluations.

Clinical Activities

Faculty cover an active consult service at Children’s Health, Parkland Memorial Hospital, and UT Southwestern University Hospitals, as well as outpatient clinic services in Asthma, Allergy, and Immunology at Children’s and the University’s West Campus.

Clinical Immunology Program

The Clinical Immunology Program was awarded recognition by the Jeffrey Modell Foundation as a Diagnostic and Research Center for primary immunodeficiency diseases. Directed by Dr. Christian Wysocki and with the new addition of pediatric nurse practitioner Kelly Ann Williams, the Clinical Immunology Program serves a large geographical referral area encompassing North Texas, eastern New Mexico, Oklahoma, western Louisiana, and southern Arkansas. This comprehensive program provides both diagnostic and state-of-the-art treatment opportunities for patients with primary immunodeficiency diseases.
The clinical program also partners with members of the basic Immunology department at UT Southwestern in research and educational efforts.

Furthermore, Dr. Wysocki staffs adult Immunodeficiency clinics at UT Southwestern and Parkland Hospital. This allows state-of-the-art treatment of adult patients with immunodeficiency disorders and, importantly, allows effective transitioning of adolescent and young adult patients from the pediatric immunodeficiency clinics to the adult clinics while maintaining continuity of care.

**Food Allergy Center**

Under the direction of Dr. Drew Bird, Dedman Family Scholar in Clinical Care, the Food Allergy Center treats a broad range of allergic diseases in both inpatient and outpatient settings and will be conducting research that is instrumental in developing treatments and therapies. This Center opened in 2010 and is the only academic-affiliated pediatric food allergy center in North Texas. Since 2015, the Food Allergy Center has been recognized as a FARE Clinical Network Center of Excellence and, in 2020, received designation as a Clinical Network Discovery Center of Distinction.

The Food Allergy Center is also home to the Dallas Eosinophilic Esophagitis Program at Children’s Health. Dr. Christopher Parrish is Co-Director of this multidisciplinary program, which utilizes a team approach to the management of eosinophilic esophagitis involving a pediatric allergist, pediatric gastroenterologists, a dietitian, and a child psychologist with expertise in feeding problems.

**Asthma and Allergy Clinic**

In addition to other allergic diseases, Drs. Jeffrey Chambliss, Rory Nicolaides, and Tim Chow evaluate and care for children with persistent allergic asthma along with a volunteer faculty member, Dr. William Neaville. The targeted therapies for these patients may include biologic therapies and/or allergy shots offered through the immunotherapy clinic. The immunotherapy clinic also treats patients with allergic rhinitis and utilizes biologic therapy in the care of patients with chronic urticaria.

Dr. Jeffrey Chambliss also cares for patients in a multidisciplinary clinic for high-risk asthma patients. This clinic joins the disciplines of Pulmonary, Allergy and Immunology, Psychology, Respiratory and Physical Therapy, Nutrition, and Social Work to address the needs of this specific patient population.

**Pediatric Drug Allergy Program**

Dr. Timothy Chow has established the Pediatric Drug Allergy program, the first and only academic-affiliated pediatric drug allergy program in Texas. Through this program, patients with a broad range of adverse drug reactions are evaluated to assess underlying mechanisms and provide individualized management recommendations to ensure that children are offered the safest and most effective drug therapeutic options. Common implicated drugs that we manage are vaccines, biologics, chemotherapeutics, beta-lactams, and other antibiotics. In addition to clinical care, the Pediatric Drug Allergy Program conducts research on the clinical features, diagnostic tools, and therapies for drug hypersensitivity reactions.

### Current Grant Support

#### Drew Bird

**Grantor:** NIH-National Inst of Allergy Infect Dis  
**Title of Project:** New Horizons in the Prevention and Treatment of Food Allergy  
**Role:** Principal Investigator  
**Dates:** 03/2021 – 02/2023

**Grantor:** Food Allergy Research & Education (FARE)  
**Title of Project:** FARE Membership - Clinical Research Center Distinction  
**Role:** Principal Investigator  
**Dates:** 07/2020 – 06/2025

**Grantor:** DBV Technologies  
**Title of Project:** Open-label Follow-up Study of the PEPITES Study to Evaluate the long-term efficacy and safety of Viaskin Peanut (PEOPLE Study)  
**Role:** Principal Investigator
Dates: 2017 – 2022

**Grantor:** Novartis Institutes For Research  
**Title of Project:** (Novartis QGE031) A 52 week, multi-center, randomized, double-blind placebo-controlled study to assess the clinical efficacy and safety of ligelizumab (QGE0312) in decreasing the sensitivity to peanuts in patients with peanut allergy  
**Role:** Principal Investigator  
**Dates:** 07/2022 – 06/2026

**Grantor:** Siolta Therapeutics, Inc  
**Title of Project:** A Phase 1b/2, randomized, double-blind, placebo-controlled, multi-center study of STMC-103H in neonates and infants at risk for developing allergic disease  
**Role:** Principal Investigator  
**Dates:** 06/2022 – 12/2040

**Grantor:** NIH-NIAID and Genentech, UM2AI13086  
**Title of Project:** Omalizumab as Monotherapy and as Adjunct Therapy to Multi-Allergen OIT in Food Allergic Children and Adults (OUTMATCH)  
**Role:** Principal Investigator  
**Dates:** 2019 – 2024

Timothy Chow

**Grantor:** American College of Allergy Asthma & Immunology  
**Title of Project:** Shoudering the Burden of Pediatric Penicillin Allergy Labels: Delabeling in the Primary Care Setting  
**Role:** Principal Investigator  
**Dates:** 08/2021 – 10/2022

Rebecca Gruchalla

**Grantor:** NATIONAL INSTITUTE OF HEALTH / Benaroya Research Inst At Virginia Mason  
**Title of Project:** ITN Clinical Trial: Systemic Allergic Reactions to SARS-CoV-2 Vaccination (SARS Vaccination) 2UM1AI109565-08  
**Role:** Co-Investigator  
**Dates:** 02/2021 – 01/2022

Christopher Parrish

**Grantor:** Regeneron Pharmaceuticals, Inc.  
**Title of Project:** A Randomized, Double-Blind, Placebo-Controlled Study to Investigate the Efficacy and Safety of Dupilumab in Pediatric Patients with Active Eosinophilic Esophagitis (R668-EE-1877)  
**Role:** Principal Investigator  
**Dates:** 08/2021 – 11/2022

**Grantor:** Regeneron Pharmaceuticals, Inc.  
**Title of Project:** A Phase 3, Randomized, 3 Part Study to Investigate the Efficacy and Safety of Dupilumab in Adult and Adolescent Patients with Eosinophilic Esophagitis (R668-EE-1774)  
**Role:** Principal Investigator  
**Dates:** 07/2019 – 12/2040

**Grantor:** DBV Technologies  
**Title of Project:** Open-label Follow-up Study of the PEPITES Study to Evaluate the long-term efficacy and safety of Viaskin Peanut (PEOPLE Study)
Role: Site Sub-Investigator  
Dates: 04/2017 – 2022

Grantor: Food Allergy Research and Education  
Title of Project: Clinical Network Discovery Center of Distinction  
Role: Co-Investigator  
Dates: 2020 – 2025

Grantor: NIH-NIAID and Genentech  
Title of Project: Omalizumab as Monotherapy and as Adjunct Therapy to Multi-Allergen OIT in Food Allergic Children and Adults (OUtMATCH)  
Role: Site Sub-Investigator  
Dates: 03/2019 – 02/2024

David Khan

Grantor: NHLBI-National Heart, Lung and Blood Institute  
Title of Project: The Dallas Asthma Brain and Cognition Study  
Role: Principal Investigator  
Dates: 07/2018 – 05/2022

Grantor: NATIONAL INSTITUTE OF HEALTH / Benaroya Research Inst At Virginia Mason  
Title of Project: ITN Clinical Trial: Systemic Allergic Reactions to SARS-

Role: Principal Investigator  
Dates: 02/2021 – 01/2022
