

A Randomized Phase III Study of Sublobar Resection (SR) versus Stereotactic Ablative Radiotherapy (SABr) in High-Risk Patients with Stage I Non-Small Cell Lung Cancer (NSCLC)

STABLEMATES TRIAL

We have reached the point that the **interim analysis needs to be completed**. Please take until **October 11, 2019**, to update the patient status through the most recent appointment. We will conduct an analysis on the overall survival for the enrolled patients. For radiation plans, please ensure that the complete structure plan, per the protocol, is submitted for review. If you have any questions, please feel free to contact Sarah Hardee. Dr. Timmerman will be following up with sites that have pending survival statuses after 10/11.
