Genetics and Molecular Mechanisms of Cutaneous Disease

A postdoctoral training position is available in the laboratory of Dr. Donald A. Glass II, MD, PhD, in the Department of Dermatology at UT Southwestern Medical Center.

The Glass Laboratory studies the genetic changes and molecular mechanisms underlying keloid pathogenesis. Our research aims to decipher the mechanisms by which keloids occur, which will ultimately lead to the identification of novel therapeutic targets to prevent keloid occurrence or recurrence. The lab also has an interest in identifying the genetic causes of rare skin diseases (genodermatoses) such as pure hair nail ectodermal dysplasia (PHNED) and craniosynostosis-anal anomalies-porokeratosis (CAP syndrome).

Candidates must hold a Ph.D. and/or M.D. degree, have experience in molecular biology, genetics, cell biology, developmental biology, or equivalent fields in basic science leading to publication in peer-reviewed journals is recommended, as are a passion for scientific inquiry and good communication skills.

Information on our training program and benefits can be found in our Postdoc Handbook or at http://www.utsouthwestern.edu/postdocs.

Interested individuals should send an updated CV, statement of interests, and a list of three references to:
