Molecular Mechanisms of Childhood Cancer Biology

A postdoctoral training position is available in the laboratory of Dr. Kenneth Chen, in the Department of Pediatrics at UT Southwestern Medical Center to study childhood cancer biology. Our laboratory has several exciting translational research projects studying molecular mechanisms of microRNA biology in childhood cancers such as Wilms tumor, spanning from the molecular genetics of the disease to the discovery of novel therapeutics, using in vitro, in vivo, and computational tools. The candidate will have the opportunity to interact and collaborate with a rich community of basic and translational scientists at UT Southwestern.

Candidates must hold a Ph.D. and/or M.D. degree. A strong foundation in molecular biology, developmental biology, cancer biology, clinical genomics, or computational biology leading to publication in peer-reviewed journals is recommended.

Information on our postdoctoral training program and benefits can be found in our Postdoc Handbook or at http://www.utsouthwestern.edu/postdocs.

Interested individuals should send a CV, statement of interests, and a list of three references to:
