DNA Damage and Cell Death Research

A postdoctoral position is immediately available in the laboratory of Dr. Yingfei Wang in the Department of Pathology at UT Southwestern Medical Center to study DNA damage and cell death (Science, 2016, 354(6308). pii: aad6872.). More specifically, we are studying how PARP-1 signaling is regulated to control cell death and survival in response to oxidative stress and DNA damage in neurons and cancer cells, using a combination of tools, including epigenetics, bioinformatics, proteomics and mouse genetics. Additional information can be found on our lab website, http://www.utsouthwestern.edu/labs/wang-yingfei/.

Self-motivated individuals with a Ph.D. or MD/PhD degree in molecular biology, neuroscience, cancer biology, or other related disciplines are encouraged to apply. The ideal candidate should have a solid publication record.

Interested individuals should send a CV, statement of interests, and a list of three references to:

Yingfei Wang Ph.D.
UT Southwestern Medical Center
5323 Harry Hines Blvd.
Dallas, TX 75390-[9072]
