Minimal Residual Disease and Metastasis

Postdoctoral positions are available in the laboratory of Dr. Srinivas Malladi, Department of Pathology at UT Southwestern Medical Center to study the biology of minimal residual disease and metastasis in breast, lung and renal Adenocarcinomas. Our laboratory is focused on understanding how disseminated cancer cells survive, evade immune surveillance and give rise to overt metastasis. We employ molecular, biochemical, immunologic, genomic, imaging and computational based techniques to understand metastatic speciation using mouse xenografts and patient samples.
