Postdoc positions in tumor hypoxia, metabolism, and gene regulation

We are particularly interested in understanding the crosstalk of oxygen homeostasis, epigenetics, and metabolism in cancer initiation and progression. The cutting-edge techniques including proteomics, next generation sequencing, and metabolomics are used in our studies. Our research is supported by NCI, CPRIT, and private foundations.

We are seeking highly motivated candidates with a PhD or MD/PhD. Interested candidates must have 1) a strong background in biochemistry, molecular biology, and oncology, 2) a strong publication record, and 3) good communication skills. Experience with bioinformatics is a plus.

Information on our postdoctoral training program and benefits can be found in our Postdoc Handbook or at http://www.utsouthwestern.edu/postdocs.

To apply, please send a cover letter, CV, and three reference letters via email to Dr. Weibo Luo (Weibo.Luo@UTSouthwestern.edu).

UT Southwestern Medical Center is an Affirmative Action/Equal Opportunity Employer. Women, minorities, veterans and individuals with disabilities are encouraged to apply.
