**Division Introduction**

Under the direction of Jeffrey Kahn, M.D., Ph.D., the Division of Pediatric Infectious Disease directs and manages two active in-patient infectious disease consultation services; one dedicated to general infectious diseases and the other dedicated to infections in the immunocompromised hosts. The Division has an active ambulatory service for children with infectious diseases, including a large clinic for HIV-infected and HIV-exposed children and adolescents at Children’s Medical Center. The Infection Control and Prevention Programs at all three Children’s campuses (Dallas, Plano, and Our Children’s House) are managed under the medical directorship of Michael Sebert, M.D.

The Division was established in the early 1960’s with one faculty member, John D. Nelson, M.D. Shortly thereafter, George McCracken joined the Division and the two managed the Division for decades, graduating more than 100 fellows, many of whom are currently leaders in academics and in the field of Infectious Diseases making the fellowship program one of, if not the, longest standing and productive Pediatric Infectious Diseases fellowship programs in the world. Drs. Nelson and McCracken were the founding editors for the Pediatric Infectious Diseases Journal, the top publication in the field of Pediatric Infectious Diseases. Currently, the Division has nine faculty members, four fellows, and several research and administrative support staff.

The Division provides an active infectious disease consultation service at Children’s and other hospitals on the UT Southwestern campus, including Parkland Memorial Hospital and Clements University Hospital. Each year the Division provides consultation and care to more than 700 infants, children, adolescents, and young adults. Faculty care for patients with inherited or acquired immunodeficiency, including those receiving immunosuppressive therapy for cancer, organ transplantation, bone marrow, and stem cell transplantation, as well as patients with inflammatory bowel disease and rheumatologic disorders and a wide variety of classic as well as unusual infectious disease problems.

Division faculty members publish an average of 10-12 papers yearly in peer-reviewed journals and are actively engaged in clinically applied research involving the areas of:

- Streptococcus pneumoniae infections
- Molecular epidemiology of respiratory syncytial virus and activation of the innate immune system by RSV
- The link between pulmonary infection and asthma, specifically the role of dendritic cells in response to rhinovirus infection in the pathogenesis of asthma
- HIV/AIDS
- Malaria epidemiology, eradication and elimination
- Ebola response preparedness
- Molecular biology of Leishmania
- Hepatitis E virus
- Infections in immunocompromised hosts
- Fungal infections
- Transplant Infectious Diseases
- Antimicrobial stewardship
- Outbreak investigations
- Innate immune response to neuroinvasive Flaviviruses

The Division is dedicated to the training of medical students, residents, and fellows. Since 1965 more than 100 physicians have completed training in the Division’s fellowship training program, and greater than 80 percent of them have academic appointments at universities and children’s hospitals worldwide.
Faculty

There are nine full-time faculty members in the Division of Pediatric Infectious Disease.

Honors / Awards

Promotions

Natasha Hanners
- Natasha Hanners, Instructor

Jeffrey Kahn
- Best Pediatric Specialists, D Magazine

Paul K. Sue
- Director of Pediatric Transplant and Immunocompromised Host Infectious Disease Service

Dawn Wetzel
- Co-chair of Signaling session, Molecular Parasitology Meeting, Woods Hole, MA
- Selected Institutional Applicant, Mallinckrodt Grant, UT Southwestern
- Member, Society for Pediatric Research

Invited Lectures

Amanda Evans
- Department of Microbiology Seminar Series, UT Southwestern, Dallas, TX, February 2017
  - “Clinical Correlates: Dysentery and the ICU”
- Department of Urology Grand Rounds, UT Southwestern, Dallas, TX, May 2017
  - “Long-Term Antibiotic Use in Children: Potential Consequences”
- CMC, Children’s Health Live Practice-to-Practice Broadcast Lecture, Dallas, TX, June 2017
  - “Group A Strep Pharyngitis: Pearls and Pitfalls of Strep Phobia”
- Texas Scottish Rite Hospital, 2017 Pharmville Conference, Dallas, TX, September 2017
  - “HIV: ARM-ing the Community Provider”
- American Society of Pediatric Nephrology, 5th Annual ASPN Multi-Disciplinary Symposium, Dallas, TX, October 2017
  - “Immunization in CKD and Immunosuppressed Patients”

Michelle Gill
- American Academy of Allergy, Asthma & Immunology Annual Meeting, Orlando, FL, March 2017
  - Invited Speaker, “The Role of Glycolysis in Antiviral Responses” presented in Symposium on Immunometabolism
• American Academy of Pediatrics PREP The Course (pediatric board review courses), St. Petersburg, FL, March 2017 and Portland, OR, August 2017
  o Invited Lecturer:
    ▪ “Infectious Diseases Workshop: Interactive Cases”
    ▪ “RNA Viruses and Pediatrics”
    ▪ “DNA Viruses and Pediatrics”

• Grand Rounds, Children’s Medical Center, Dallas, TX, May 2017
  o Invited Speaker, “Decreased Efficacy of the Live Attenuated Influenza Vaccine (LAIV): Challenges in the Mist”

Natasha Hanners

• 49th Annual Kenneth C. Haltalin Pediatrics for the Practitioner, Irving, TX, April 2017
  o “722 Days of Zika: What We Have Learned and What’s on the Horizon”

Michelle Hsiang

• Antiparasite Roll-out Group, London, UK, June 2017
  o “Current Empirical Evidence for Screen and Treat and Mass Drug Administration”

• Swiss Tropical and Public Health Institute, Basel, Switzerland, September 2017, Discussion Round
  o “Malaria Elimination - Exchange of Expertise and Experience”

• Bill and Melinda Gates Partners Meeting, Baltimore, MD, November 2017
  o “Reactive Focal Interventions to Reduce Malaria Transmission”

Jeffrey McKinney

• 10th Annual Transfusion & Laboratory Medicine Conference, Dallas, TX, March 2017
  o “Mosquito Borne Diseases: Update for Laboratory Medicine Teams”

Dawn Wetzel

• International Parasitology Meeting, Chicago, IL, June 2017
  o “Targeting Cell Entry as Therapy for Leishmaniasis”

Conference Presentations

Poster, Pediatric Academic Societies Meeting, San Francisco, CA, May 2017

Jamison R, Mahony L, McKinney J, Hicks P.

Poster, Pediatric Academic Societies Meeting, San Francisco, CA, May 2017
“Matters of the Heart: Evaluation of a New Online Ambulatory Cardiology Curriculum for Residents”

Poster, CHRC Annual Retreat, Dallas, TX, October 2017
“Interferon-Mediated Control of Neuropathogenic Flaviviruses”
Education and Training

The Division of Pediatric Infectious Disease provides educational opportunities for medical students and pediatric residents in addition to its accredited fellowship program.

Pediatric Infectious Diseases is a consultative service, in which faculty interact with all divisions in the department and assist in the management of children with a variety of underlying medical problems. Most consultations involve hospitalized patients, but there are general infectious disease and HIV/AIDS clinics in which patients are managed on an outpatient basis. Medical students can elect to work in these clinics under supervision of the fellows and faculty. The elective rotation is open to second-, third- and fourth-year medical students and pediatric residents, the latter being given more autonomy because of their greater clinical experience. Visitors from other medical schools and residency training programs are welcome.

The Division of Pediatric Infectious Disease has a long tradition of training fellows in the subspecialty. Since 1965, more than 100 fellows from 28 countries have completed training in infectious diseases. Eighty percent are involved in teaching and research in university-affiliated medical centers.

Many graduates are leaders in the field of infectious diseases, and some have become division directors and department chairs or deans of medical schools.
The purposes of the training program are to provide a background in laboratory techniques of classical microbiology, immunology, and molecular biology, to provide experience in application of the scientific method to clinical and laboratory research, and to develop competence in diagnosis and management of infectious diseases. Clinical training is in the form of consultations, rounds, and conferences, and outpatient Infectious Disease and HIV Clinics.

Dr. Kahn serves as the Pediatric Infectious Disease Fellowship Program Director. All division faculty, each with specific clinical and research interests, actively participate in the training program. Each trainee is instructed in all relevant basic laboratory methods, including fundamentals of aerobic and anaerobic bacteriology, antibiotic susceptibility testing, antibiotic assays, serologic techniques, immunoelectrophoresis, the fluorescent antibody method, tissue culture technique, and leukocyte function studies.

Additionally, the fellows have ample opportunity to work with collaborators in molecular microbiology to acquire basic techniques such as PCR, microarray analyses, cloning, transcriptome analyses and purification of bacterial outer membrane components (e.g. endotoxin).

The trainee carries through one or more research protocols of his or her own design with supervision by the program directors and collaborators. This is tailored to the interests and capabilities of the individual trainee, either in basic laboratory experimentation or in clinical research.

The clinical experience at Children’s Medical Center and on the neonatal service at Parkland Health & Hospital System and the newly opened Clements University Hospital is extensive. There are approximately 120,000 outpatient visits, 9,000 pediatric admissions, and 16,000 deliveries per year. A high proportion of these have infectious disease problems; therefore, trainees have the opportunity to see many common infections and most of the rarer disorders.

Infectious disease clinical rounds are conducted daily; there are outpatient clinics at least four days each week. The Division averages approximately 60 inpatient consultations monthly and 15-20 new outpatient consultations monthly.

The three-year fellowship training program aims to provide individuals with sufficient background to pursue a career of independent research, teaching, and managing patients with wide variety of pediatric infectious diseases.

**Research Activities**

Pediatric Infectious Disease faculty are actively engaged in numerous investigations that provide an invaluable opportunity to learn the most modern molecular biologic techniques and to apply these to common clinical problems in pediatrics. The Division has a long-standing history in clinical investigation and has published landmark papers in many areas including clinical trials of anti-inflammatory agents in bacterial meningitis, diagnostic studies using polymerase chain reaction (PCR) in congenital syphilis and pneumonia, and studies of endotoxin concentrations in body fluids of infants and children with meningococcal or Haemophilus meningitis and correlating these values with outcomes.

- Jeffrey Kahn’s areas of scientific research include emerging pathogens, respiratory syncytial virus, human metapneumovirus and rhabdoviral vectors.
- Michelle Gill, whose research centers on evaluating the role of dendritic cells in pediatric respiratory viral infections, partners with the Division of Pediatric Allergy and Immunology to evaluate the role of dendritic cells in asthma pathogenesis.
- Natasha Hanners’ clinical and research interest is in viral encephalitis and the innate immune response in control on neuroinvasive viruses.
- Michelle Hsiang’s research focuses on malaria eradication and elimination.
- Dawn Wetzel focuses on host: pathogen interactions in, and drug development for, the parasitic infection leishmaniasis.
- Paul Sue’s interests are in the epidemiology and clinical features of hepatitis E virus, fungal infections in the immunocompromised host, transplant infectious diseases.
Research areas include:

- The link between pulmonary infection and asthma
- HIV/AIDS
- Immunogenetic profiles of children with various infections
- Respiratory syncytial virus
- Hepatitis E virus
- Innate immune response to Flaviviruses
- Infection Control and Prevention
- Infections in immunocompromised hosts
- Fungal infections
- Transplant Infectious Diseases

The Division has established collaborative research programs with members of the Departments of Microbiology and Immunology at UT Southwestern. The principle goals of these collaborative projects are:

- To delineate the molecular immunobiologic basis for the pathogenesis of certain infectious diseases in pediatrics
- To define and control the inflammatory processes involved in bacterial infections, such as bone and joint infections
- To develop the immunobiologic profiles of children with infectious diseases

**Clinical Activities**

The Division provides an active infectious disease consultation service at Children’s and other hospitals on the UT Southwestern campus including Parkland Memorial Hospital and Clements University Hospital. Each year, the Division provides consultation and care to more than 700 infants. Faculty care for patients with inherited or acquired immunodeficiency, including those receiving immunosuppressive therapy for cancer, organ transplantation, bone marrow, and stem cell transplantation, as well as patients with inflammatory bowel disease and rheumatologic disorders and a wide variety of classic as well as unusual infectious disease problems.

In addition to the infectious disease outpatient clinic and the infection control program at Children’s, the Division is responsible for directing:

- The AIDS-Related Medical Services Clinic (ARMS)
- The Infection Control Program under the leadership of Michael Sebert, M.D.
- The Solid Organ Transplant Infectious Diseases Clinic

Current Grant Support

Amanda Evans

**Grantor:** DFAN/Ryan White Part D Women Infants Children, Youth & Affected Family Members AIDS Healthcare  
**Title of Project:** Coordinated Services and Access to Research for Women, Infants, children, and Youth  
**Role:** Principle investigator  
**Dates:** 2017 - current

Michelle Gill

**Grantor:** NIAID  
**Title of Project:** Mechanistic Study Development for ICAC3 MUPPITS and CoNAC Protocols  
**Role:** Principle Investigator (NIAID ICAC3 Administrative Site: University of Wisconsin)  
**Dates:** 2015 – 2019

**Grantor:** NIH NIAID Inner City Asthma Consortium 3 (ICAC3, UM1AI 114271)  
**Role:** Co-investigator (PI: R Gruchalla)  
**Title of Project:** Immunologic Approaches to Reduce Asthma  
**Dates:** 2014 – 2021

Natasha Hanners

**Grantor:** NIH 5 K12 HD-068369-07, UT Southwestern Department of Pediatrics  
**Title of Project:** Antecedents & Sequelae of Childhood Onset Diseases  
**Role:** Co-Principal Investigator  
**Dates:** 2016 – current

**Grantor:** Children’s Medical Center CCRAC  
**Title of Project:** Interferon-mediated Control of Encephalitogenic Viruses  
**Role:** Principal investigator  
**Dates:** 2015 – 2018

Michelle Hsiang

**Grantor:** Horchow Family Fund  
**Title of Project:** Scholarship Award for Endowed Scholars in Pediatrics, UT Southwestern  
**Role:** Principle Investigator  
**Dates:** 2014 – 2018

**Grantor:** NIH / NIAID  
**Title of Project:** Evaluating re-active surveillance strategies for malaria elimination in Swaziland  
**Role:** Principle Investigator  
**Dates:** 2012 – 2017

**Grantor:** Burroughs Wellcome Fund – American Society of Tropical Medicine and Hygiene  
**Title of Project:** Malaria Elimination Surveillance in Swaziland: Investigation of Strategies to Improve Sensitivity and Efficiency for Detection of Secondary Cases  
**Role:** Principle Investigator  
**Dates:** 2012 – 2018
Jeffrey Kahn

Grantor: National Institutes of Health  
Title of Project: Innate Immune Activation by Respiratory Syncytial Virus  
Role: Principle Investigator  
Dates: 2016 – 2018

Dawn Wetzel

Grantor: NIH, K08  
Title of Project: Targeting Entry Pathways for Leishmaniasis  
Role: Principle Investigator  
Dates: 2012 – 2017

Grantor: Children’s Medical Center CCRAC  
Title of Project: Targeting Cell Entry as Therapy for Leishmaniasis  
Role: Principle Investigator  
Dates: 2015 – 2017

Grantor: NIH NIAID, R21 AI121820  
Title of Project: The Role of Flagellar Motility to Innate Immune Recognition of Bacteria  
Role: Collaborator; Brent Berwin, PI (Dartmouth College)  
Dates: 2016 – 2018
