Dragonfly: Fast, gentle, quantitative imaging from the millimeter to nanometer scale

Uncover hidden detail, save time, and preserve your precious sample with the Dragonfly, Andor's fast and flexible confocal imaging system.

Fast confocal imaging (up to 400fps), a complete complement of excitation lines from 405nm - 785nm and nanoscale super-resolution in one instrument

Hands-On

10 - 13 JAN

DEMO
REGISTRATION

Experience the Dragonfly + Imaris 10 @ UTSW

Bring your own fixed or live sample

Capture and analyze stunning confocal data quickly and efficiently

5 high-powered laser lines available
(405, 488, 561, 637, 730)

Imaris experts available to showcase a seamless acquisition to analysis workflow

SPACE IS LIMITED! PLEASE RSVP IMMEDIATELY
