

Sugar Detective: How to Spot the Added Sugars in Foods

Sugar Shakedown

Added sugars are sugars incorporated during the processing of a food and beverage. They are different than the naturally occurring sugar found in foods like dairy products, milk and grains. Limiting the intake of added sugars is an important part of a healthy eating pattern and disease prevention. The challenging part is that there are sixty-one different types of added sugars used by food manufacturers and many of them are hidden. Your best source to determine the amount of added sugar is to check-out the nutrition facts label and look under the 'Added Sugar' section. Choose products with less than 5% Daily Value. You can also look at the ingredients list for the following types of added sugar to determine if a product contains added sugar.
